HOW DO THE STATE AID RULES INFLUENCE THE DEVELOPMENT OF THE EUROPEAN ENERGY MARKET?

SEMESTER:

Bachelor or Master's thesis.

KEYWORDS:

Security of supply, market design, microeconomic principles, macroeconomic principles, game theory, competition law.

BACKGROUND:

The European Commission has increased its focus on the interpretation of state aid rules, including that the countries must create an internal European market for energy. In some cases, this may mean that Energinet is forced to change its procurement procedure for eg properties required to maintain power system stability, which contribute to ensure the grid functionality and hence the security of supply in Denmark.

PROBLEM:

What effect does increased focus on the state aid rules have on Energinet's future procurement procedures, and what is the effect on the different market setups?

DESCRIPTION:

With an increased focus on the state aid rules, there is a need for an evaluation of Energinet's procurement procedures.

We would like a review of:

1. How a specific market or product is affected by the changed state aid rules as well as how the market/product can be designed to comply with to the rules.
2. How security of supply will be affected by the changed state aid rules.

CONFIDENTIALITY:

No.

LANGUAGE:

Danish or English.
